• User-friendly interface • Quick and easy to use • Safe and secure • Get Japanese reading and Kanji from all text • Get more info from Kana or RomajiQ: How to clean up a collection when it is too big to fit in memory? My client has a C++ application that uses a (collection of) list of objects. The application runs for a long time, and eventually, when the objects in the collection are not kept in memory anymore (they are stored in another location), the application throws an exception. I want to understand how to clean up the collection, because I want to avoid that problem. What I've tried so far: Add the objects to an own collection Add the objects to a queue Have a notification event that periodically removes the objects from the queue and then deletes them

Is there anything else to consider? EDIT I think I should elaborate a bit about the problem. The application is a data base management system. The collection of objects is a set of database records. The application processes records one by one. Each record has a reference to other records, it is not possible to process two records with a reference to the same record. After the record has been processed, the reference to the record in the data base is updated and the reference is removed from the collection. The application is in no way supposed to handle records that are still referenced in the data base. A: If you have a persistent collection, that has persisted your objects, you will want to use a database library for your specific needs (i.e. like the one here. Your options, depending on the database, are to Delete all objects from the collection Delete only matching objects from the collection Flag all objects in the collection I'd suggest flagging, as it will allow your process to keep running, as long as there are no exceptions thrown from anything that manipulates the flag. Democrat Stacey Abrams' narrow loss in Georgia's race for governor couldn't prevent her from raising millions of dollars. Approximately \$18 million was raised since Tuesday night's election, by the day after, as Abrams' supporters were trying to find a winner and those supporting the incumbent, Brian Kemp, started to feel the sting. Kemp, who has been secretary of state since 2002 and has been considered his party'

Scan Japanese words and automatically mark Translate Japanese to English or any other language Show translations for J-Tool Show Japanese characters and show the readings Search for words in text, words and sentences Copy Japanese text and paste it in a text box Free, portable and easy to handle Cool app for Japanese language analysis It does pretty much everything Pros It works like a charm Cons Don't know how to do anything 19 May 2015 J-Tool Review By User @ Xda Lovely Do what it says it's going to do! Easy to use. Have converted all sorts of Japanese text and it hasn't let me down yet. I just wish that this was available on Windows Phone. I would happily pay for it. Great help app for Japanese and Kanji The app is just a huge help in doing Kanji. I can enter a Kanji and it tells me what the meaning is, I then get a list of radicals which I can use for retraining the brain. Thank you Pros Cons Overall, the app is great but the fact the app is not available for WP is a major downfall. Works well as described Installation was easy and I have been using J-Tool all day. The user interface is intuitive and the "jismatsudan.com" is easy to access for any questions. The results is good: The kanji meanings are shown on the screen together with the readings. It is really handy to make quick checks and write you answer down on a paper. The only remaining issue: The conversion to kana is still a bit slow. Hopefully, this will be speed up soon. Tips and News from ALL Android Phones in English (Google Play) Everyone likes nice wallpapers, and there are lots to choose from. Most are free (or at least fairly cheap) to download, but it can be tough finding that perfect wallpaper. And because they can take up quite a bit of space on your phone, most of them are images and videos that you'll have to download once, on your phone, and then not download again. But, what if you didn't have to download an image or video? What if you could just click a button and add your images, which you already own, to a wallpaper slideshow? Right now, you can. The Windows Phone 8 Wallpaper app does just that, and lets you add images that you're already syncing to your phone. Check it out, and let us know what you think in the comments. Not only for the reasons listed above, but you can also send different objects (i.e. a t-shirt, a ribbon, a wrapped gift, etc) to make a story by changing the cover. This is basically a song video hybrid that essentially removes the "filmmaker" element of the song, leaving the artistry in our hands. We will explore the different types of Snapchat filters we can use to create a good
