This article will walk you through the basic procedures you need to know to edit an image in Photoshop Cracked Accounts. We'll discuss important concepts, important components, how to manipulate text, layer properties, and many other topics. The Importance of Good Lighting When first starting out, don't be afraid to shoot with available light or sunlight. Let the sun make your images look great, even when you're trying to take pictures indoors, like in an office or shop. As for your subject, you can use whatever you want, even a still life, but you'll want to use a good lighting that fills your subject and enhances the colors of the subject, not obliterate it. And make sure you're using a good DSLR or entry-level bridge camera that is capable of good quality RAW images. Photos taken with a low-quality point-and-shoot camera or low-end cell phone camera will result in a less than decent image, as it's hard to produce good quality JPEG images with a small sensor and low quality processor. Steps for Learning Photoshop Here is a quick overview of the basics you'll need to know: Understanding the Basic Components Photoshop consists of only two types of objects: layers and groups. A layer is a collection of shapes, text, colors, effects, or other settings. You can have one layer containing only a color for the background, or you can group multiple layers together. A group is a collection of layers that is visible. When you apply a filter to a layer group, that filter affects all the layers inside

the group. You can also create your own named layer groups that contain layers that you use frequently. You can edit a layer, create a new layer, or create a layer group in several ways. Selecting an Object in Photoshop In Photoshop, any object can be selected by clicking on it with the mouse cursor. To select multiple objects, click on the first object, then click on the last object while holding down the Shift key to select all of the objects in the selection. If you want to quickly select several objects by holding the Option key, you can click on the first object, hold the Option key, then click on the last object. To select an object that is highlighted in the Layers palette, click on the arrow beside the Layer Thumbnail (located in the lower-right corner) and click the highlighted layer. Drawing and Editing
