Tricks that Photoshop has never had are the use of iPad and the Pencil for this. You can use the technology for much more than painting. There are two types of brushes. One is an edge tool, like a pen with a special tip that allows for a technique like the one you'd use with a quill and ink. This tool is the closest you can come to drawing with a quill. You can also apply vectors, or the movements of a path, either as an outline or filled. With these, you can apply a brush stroke to elements like a selection with a special tool. You can even use them to create a nested drawing, which is no easy task. This is possible because you can select the space and size of a brush stroke, so that you can deal with as much as you need. There are also illustration, chalk, stipple, loop and noise tools. At present, there are 23 brushes in Adobe Photoshop with brushes in each of the 17 possible styles.

Software like Adobe's Photoshop or Adobe's Lightroom can't compare though. For one, software like Photoshop is $700. But maybe the best way to demonstrate the power of the tool is by focusing on a much smaller operation.. The other day, I needed to create a double exposure effect. Without a computer, the answer is brushwork. First, I wanted to establish a bright frame against a dark background. Then, I wanted to draw a model over a dark background that looked like that. This is pure hand-to-eye interaction in imagery, coupled with a creative approach to the task.

There are other tools for this as well. Like a simple selection tool, which I used to create my dark frame. Then, to create the actual model, I first used some sort of radial gradient mask. Using the black background as my core, I used a style that was only the black and white blend to create a main concentration.
